

Correction Notice — AI-Tool Disclosure in U.S. History Hack Compliance Materials

From: Sean Reynolds, TroopToTeacher Technologies, LLC

Re: Correction to how two AI authoring tools were described in previously shared compliance documents (AI Disclosure, Privacy Policy, Terms of Service, Data Processing Agreement, FERPA / Student-Data-Privacy Statement, and the Tennessee Compliance Matrix).

Summary

In materials already shared with the district, our AI disclosures grouped two authoring-time AI tools — **Anthropic Claude** and an **OpenAI** model — together, which implied both were used to generate written content. That was imprecise. This notice states the correct division of use. **No underlying practice changed** — only the description of which tool did what. We are sending this proactively in the interest of full transparency.

What the documents said

Earlier versions described “third-party large language models (Anthropic Claude and OpenAI)” as authoring-time tools used to help draft content, without distinguishing their roles.

What is accurate

Tool	What it was actually used for
Anthropic Claude (large language model)	Drafting text — instructional content and quiz questions.
OpenAI image-generation model	Producing illustrations only — printed workbook cover art, the narrative-story characters “C-Q130” and “CORE,” the in-app avatar images, and decorative icons.

Every AI-assisted item — text and image alike — was reviewed, fact-checked, and approved by a qualified human educator before inclusion.

What did not change

- **No AI runs at runtime.** Students never interact with a language model or any AI system. All questions, feedback, definitions, hints, and adaptive logic are static, pre-authored, and deterministic (rule-based) — not machine-learning or LLM-driven.
- **No student data is ever sent to any AI tool** — not to Anthropic, not to OpenAI, not to any other AI provider, at any time. Both tools were used only at authoring time, on public / non-PII inputs.
- **No image depicts a named or real person.** All AI-generated imagery is fictional or generic.

Additional step we have taken (AI-generated avatars paused)

Out of an abundance of caution, the in-app **AI-generated avatar images are currently paused / hidden** in the product pending completion of an internal AI-provenance and copyright review. Students and all other users cannot see or select them while paused. This is reversible; we will not re-enable them until that review is complete. Provenance for each AI-generated image (tool, and — once confirmed from our archive — model version, prompts, and generation dates) is being recorded internally.

Corrected documents

We have corrected the description across all affected materials and can re-share updated copies on request:

- Public AI Disclosure page (English and Spanish)
- Privacy Policy
- Terms of Service
- Data Processing Agreement (sub-processor list)
- FERPA / Tennessee Student-Data-Privacy Statement
- Tennessee State Law Compliance Matrix (AI-in-instruction row)

If it would be helpful, we are glad to walk through any of these with your technology or curriculum team.

Respectfully,

Sean Reynolds
